Figure 1A

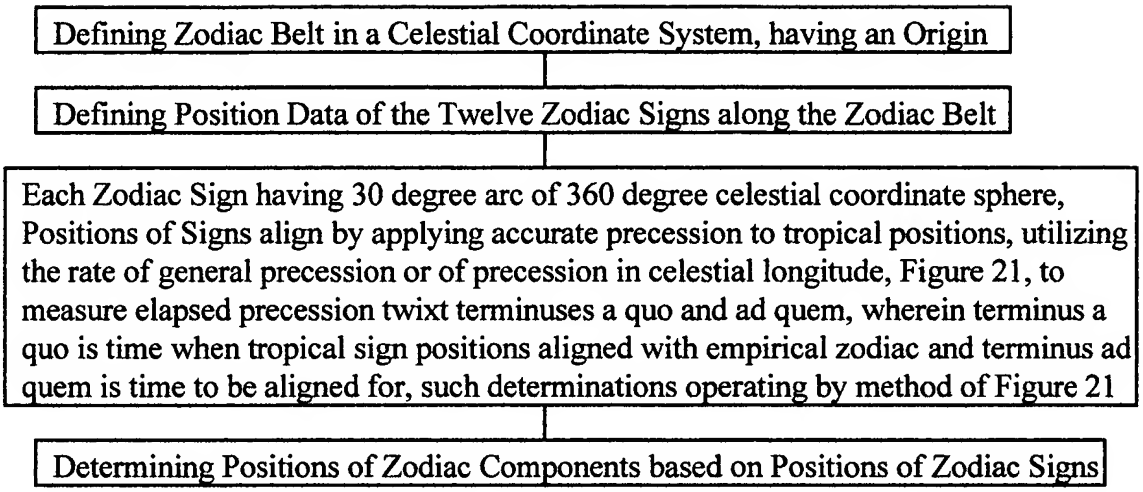

Figure 1B

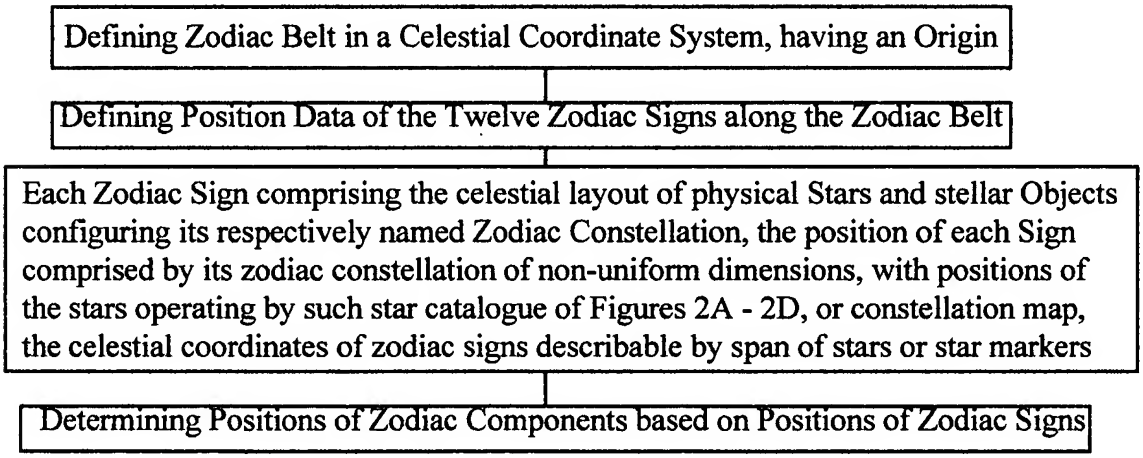

Figure 1C

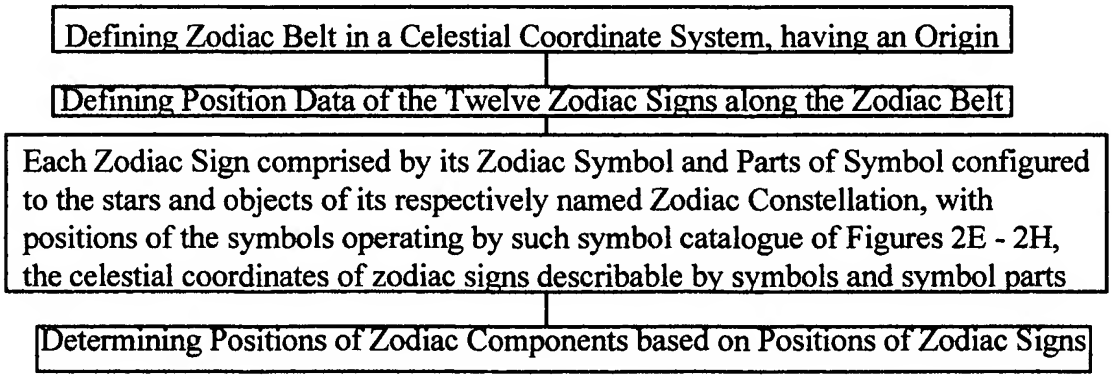

Figure 1D

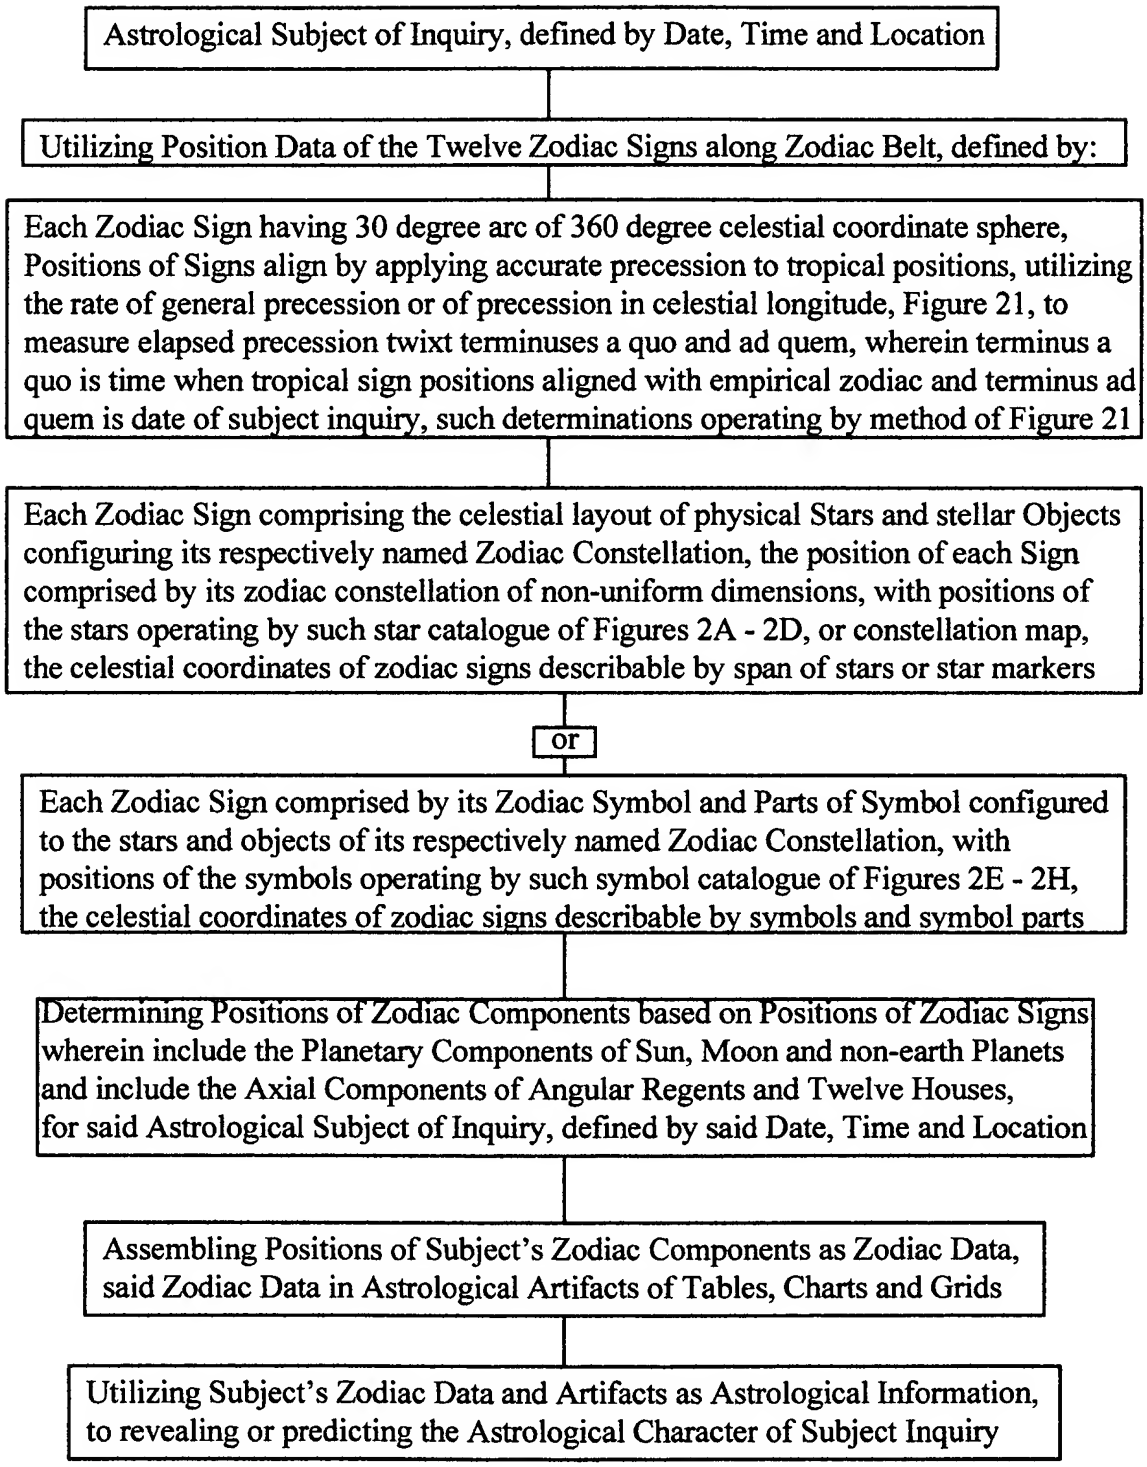
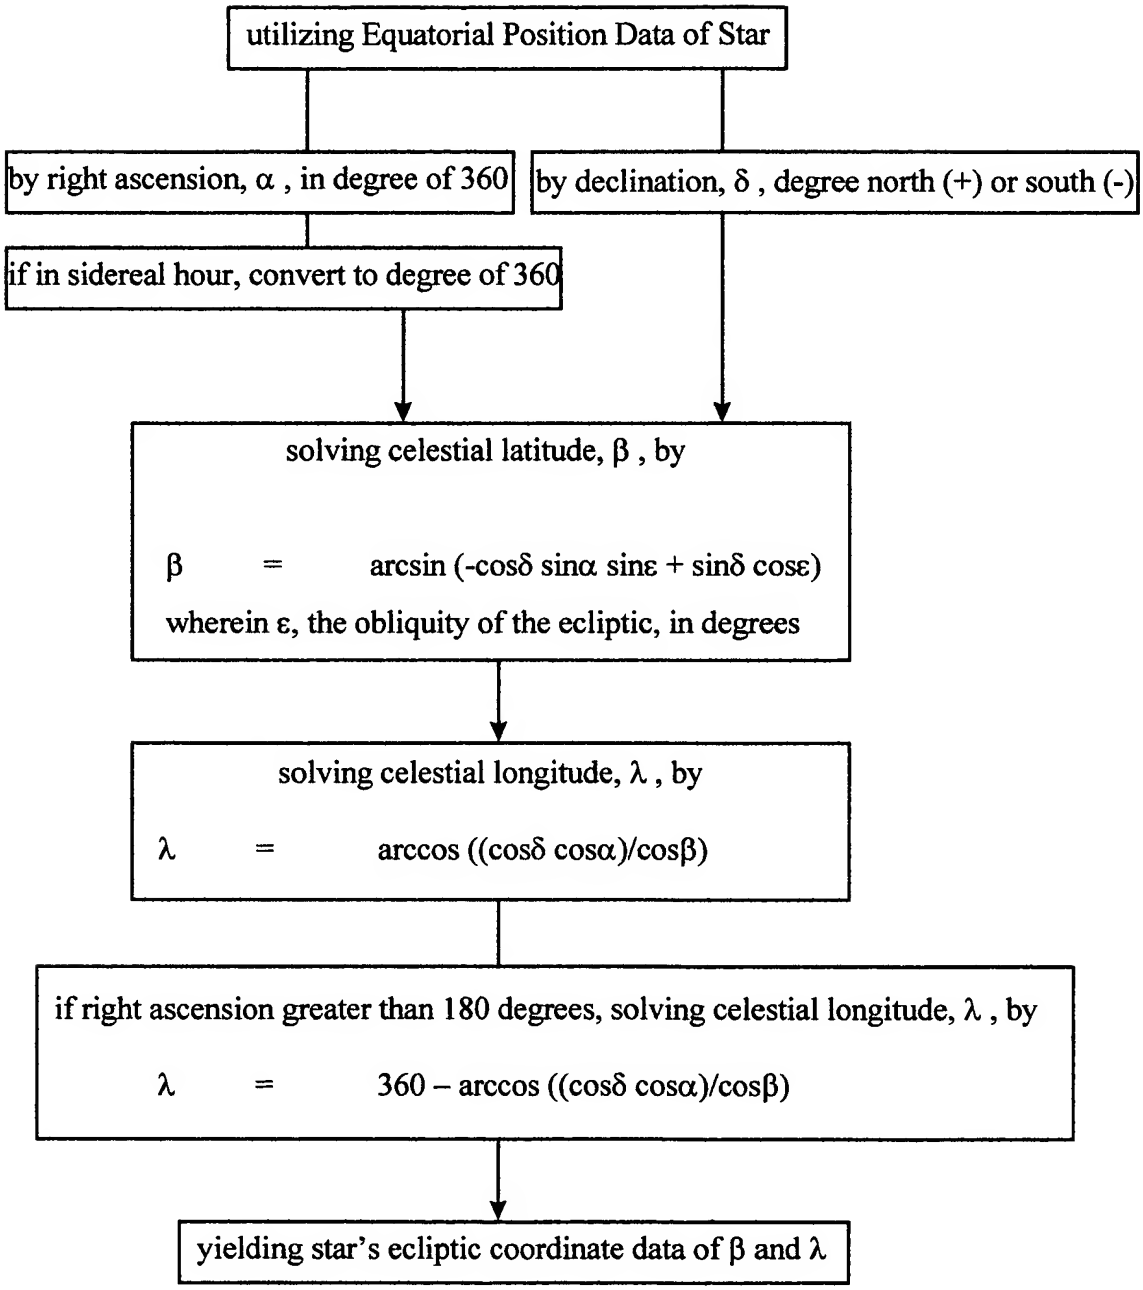


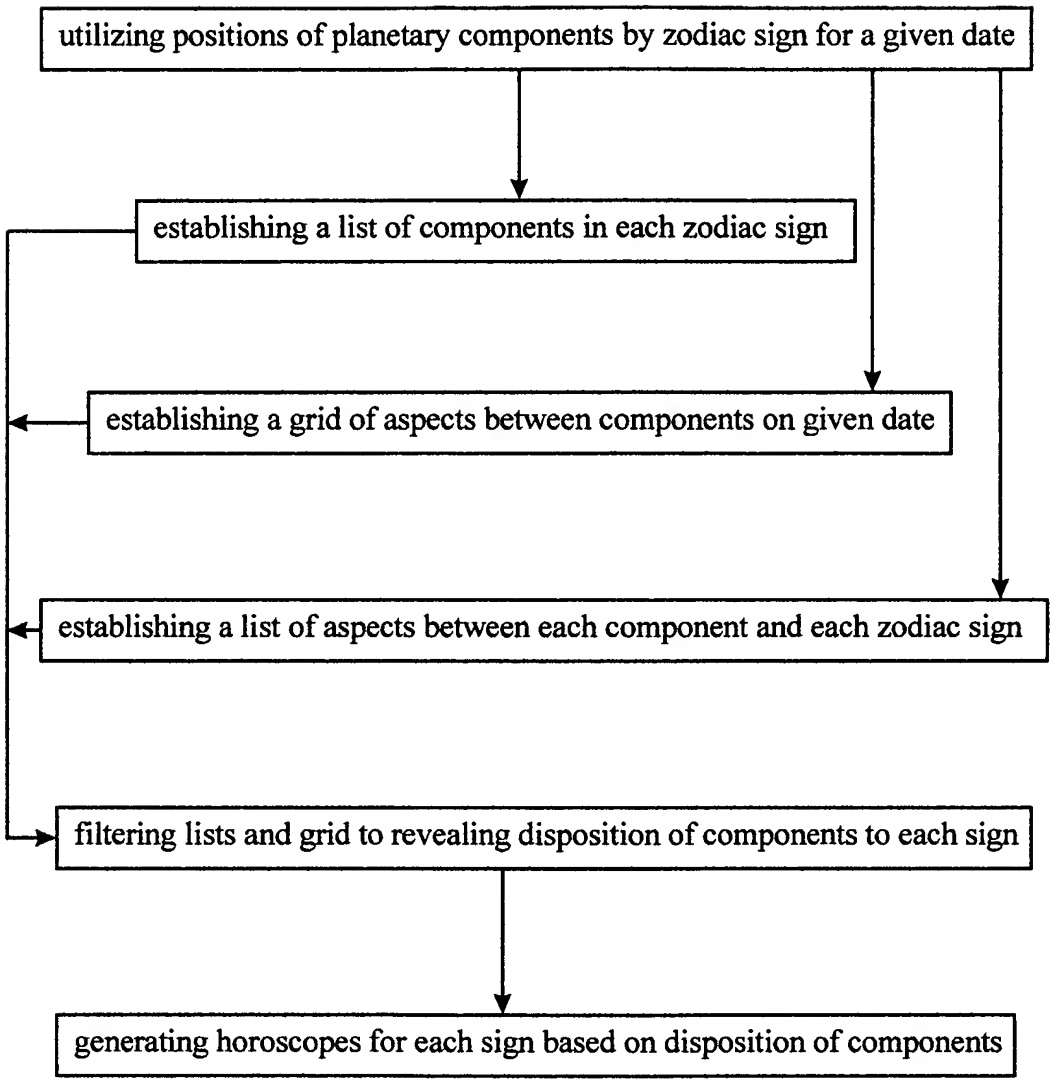
Astrological Subject of Inquiry, defined by Date, Time and Location
Utilizing Position Data of the Twelve Zodiac Signs along Zodiac Belt, defined by:
Each Zodiac Sign having 30 degree arc of 360 degree celestial coordinate sphere, Positions of Signs align by applying accurate precession to tropical positions, utilizing the rate of general precession or of precession in celestial longitude, Figure 21, to measure elapsed precession twixt terminuses a quo and ad quem, wherein terminus a quo is time when tropical sign positions aligned with empirical zodiac and terminus ad quem is date of subject inquiry, such determinations operating by method of Figure 21
Each Zodiac Sign comprising the celestial layout of physical Stars and stellar Objects configuring its respectively named Zodiac Constellation, the position of each Sign comprised by its zodiac constellation of non-uniform dimensions, with positions of the stars operating by such star catalogue of Figures 2A - 2D, or constellation map, the celestial coordinates of zodiac signs describable by span of stars or star markers
or
Each Zodiac Sign comprised by its Zodiac Symbol and Parts of Symbol configured to the stars and objects of its respectively named Zodiac Constellation, with positions of the symbols operating by such symbol catalogue of Figures 2E - 2H, the celestial coordinates of zodiac signs describable by symbols and symbol parts
Determining Positions of Zodiac Components based on Positions of Zodiac Signs wherein include the Planetary Components of Sun, Moon and non-earth Planets and include the Axial Components of Angular Regents and Twelve Houses, for said Astrological Subject of Inquiry, defined by said Date, Time and Location
Assembling Positions of Subject's Zodiac Components as Zodiac Data, said Zodiac Data in Astrological Artifacts of Tables, Charts and Grids
Utilizing Subject's Zodiac Data and Artifacts as Astrological Information, to revealing or predicting the Astrological Character of Subject Inquiry

Figure 2



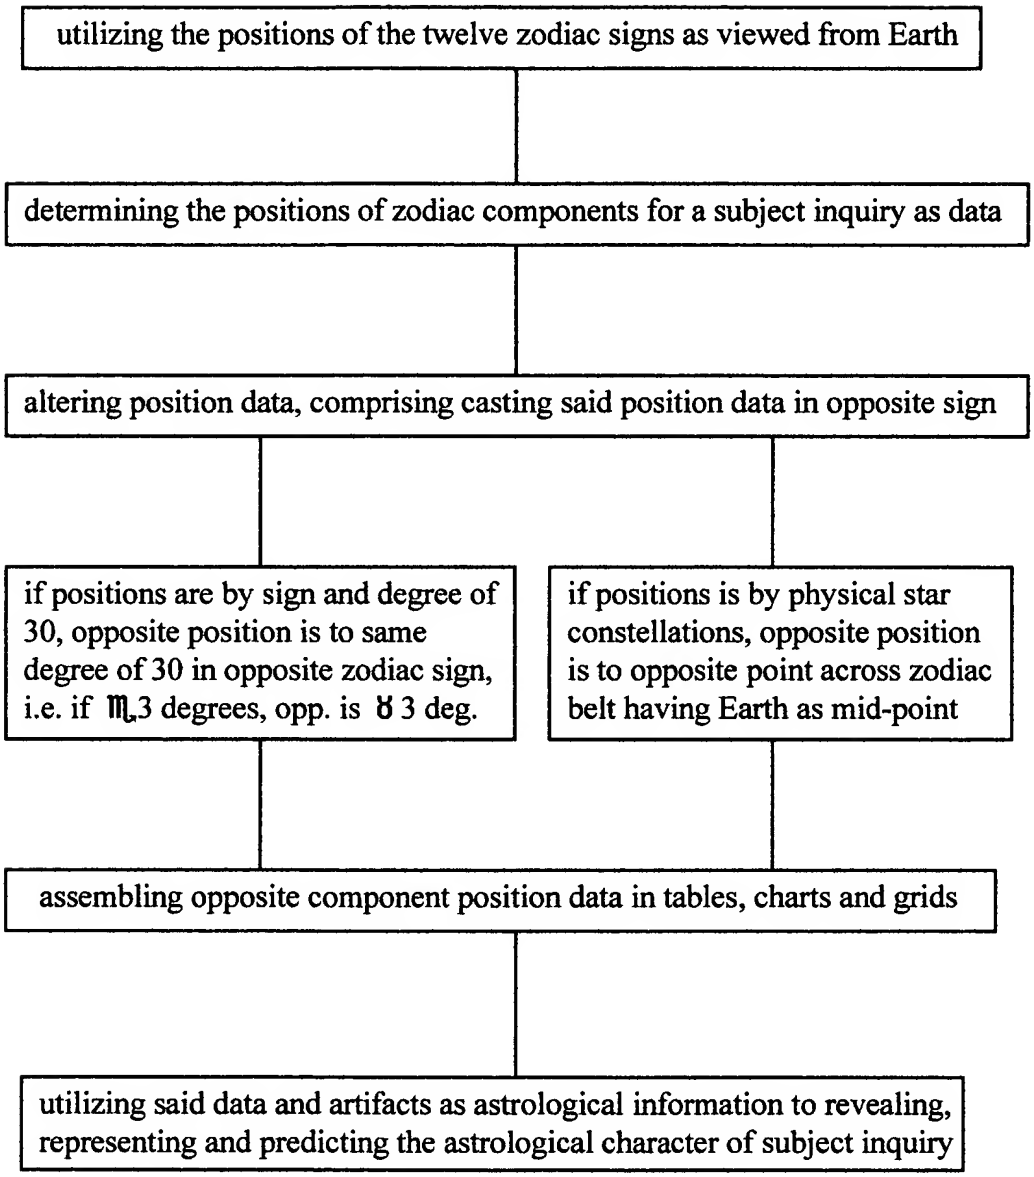
utilizing Equatorial Position Data of Star
by right ascension, α , in degree of 360
by declination, δ , degree north (+) or south (-)
if in sidereal hour, convert to degree of 360
solving celestial latitude, β , by
β = arcsin (-cosδ sinα sinε + sinδ cosε)
wherein ε, the obliquity of the ecliptic, in degrees
solving celestial longitude, λ , by
λ = arccos ((cosδ cosα)/cosβ)
if right ascension greater than 180 degrees, solving celestial longitude, λ , by
λ = 360 – arccos ((cosδ cosα)/cosβ)
yielding star's ecliptic coordinate data of β and λ

Figure 10C



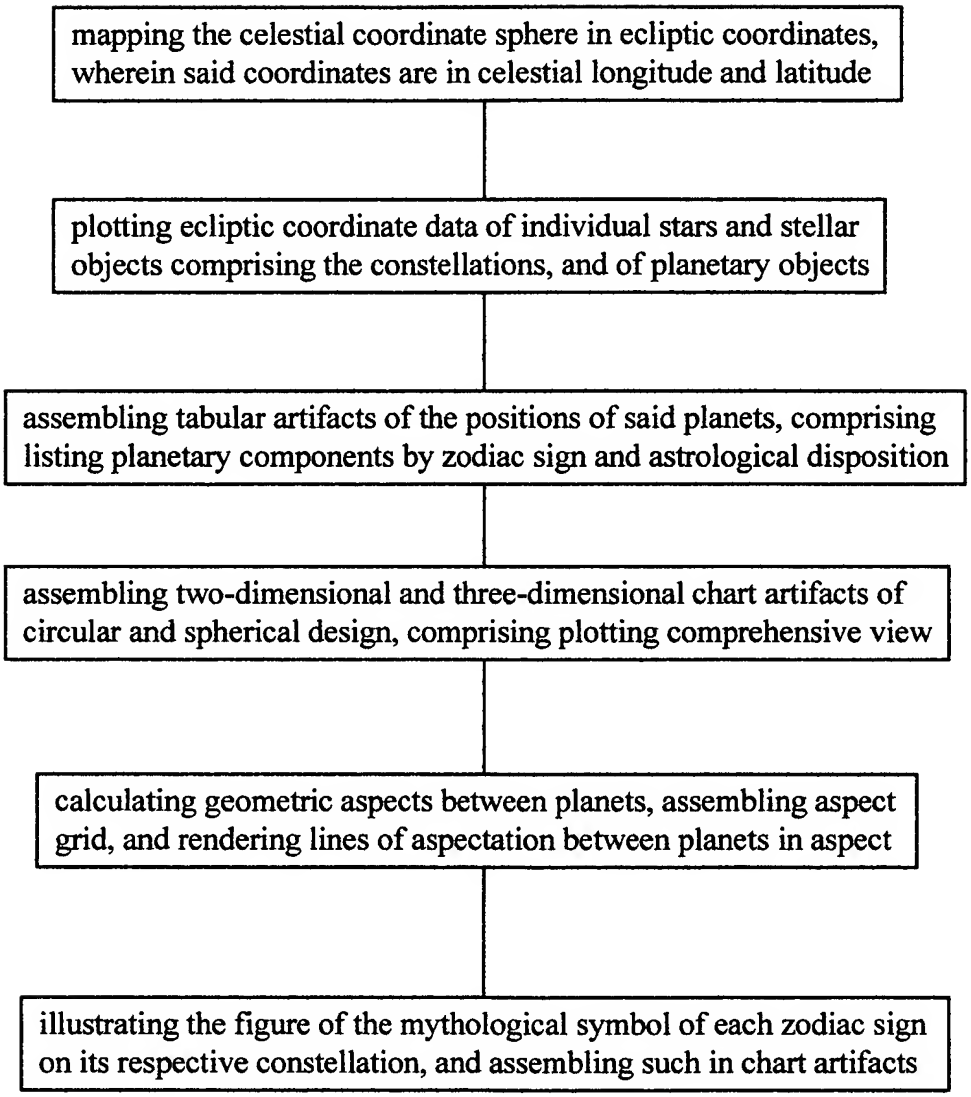
utilizing positions of planetary components by zodiac sign for a given date
establishing a list of components in each zodiac sign
establishing a grid of aspects between components on given date
establishing a list of aspects between each component and each zodiac sign
filtering lists and grid to revealing disposition of components to each sign
generating horoscopes for each sign based on disposition of components

Figure 11C



utilizing the positions of the twelve zodiac signs as viewed from Earth
determining the positions of zodiac components for a subject inquiry as data
altering position data, comprising casting said position data in opposite sign
if positions are by sign and degree of 30, opposite position is to same degree of 30 in opposite zodiac sign, i.e. if ♏3 degrees, opp. is ♉ 3 deg.
if positions is by physical star constellations, opposite position is to opposite point across zodiac belt having Earth as mid-point
assembling opposite component position data in tables, charts and grids
utilizing said data and artifacts as astrological information to revealing, representing and predicting the astrological character of subject inquiry

Figure 22A



mapping the celestial coordinate sphere in ecliptic coordinates, wherein said coordinates are in celestial longitude and latitude
plotting ecliptic coordinate data of individual stars and stellar objects comprising the constellations, and of planetary objects
assembling tabular artifacts of the positions of said planets, comprising listing planetary components by zodiac sign and astrological disposition
assembling two-dimensional and three-dimensional chart artifacts of circular and spherical design, comprising plotting comprehensive view
calculating geometric aspects between planets, assembling aspect grid, and rendering lines of aspectation between planets in aspect
illustrating the figure of the mythological symbol of each zodiac sign on its respective constellation, and assembling such in chart artifacts
